Short Interest Factor Baskets

The Short Interest factor in brief

- Most liquid stocks traded in Bovespa, comprised in B3's Mid-Large (MLCX) and Small Cap (SMLL) indices.
- Our factor combines information on:
  - **Days to Cover (DTC)**: the number of days required to cover all current shares on loan, based on the stock's liquidity and
  - **Lending Rates (LR)**: the rates investors are paying to short a security.
- The SI composite has proven to yield significant risk-adjusted returns and high return predictiveness.
- The least shorted stocks (low DTC and low LR) tend to consistently outperform both the market and the most shorted stocks (high DTC and high LR).
- Our Short Interest Factor initiation can be found here.
